

### Building a safety culture

In order to ensure the integrated management of the EHS infrastructure, KKPC holds integrated safety and environmental management meetings led by the CEO twice a year, and thus reviews the environmental and safety processes at each plant site. At the Safety and Environment Committee meeting that is held at least once a quarter, we discuss and make prompt decisions on EHS management policy, plans and regulations. We also strive to prevent accidents and respond to any that takes place by improving our emergency operational systems, including setting up emergency organizations at each plant site and holding emergency response drills.

Other measures that improve safety management include comprehensive safety inspections in each area and weekly 'safety protection dialogue' at all plant sites. Changes in safety and environmental regulations are monitored every day, and shared on internal bulletin boards. In addition, we review safety of working environment for all employees and suppliers. We also identify risk factors preemptively through annual internal safety inspections at each plant and cross-safety inspections between plant sites, which include external expert inspectors, in our efforts to improve safety management facilities.

#### ZERO ACCIDENT STATUS AT KKPC

## ENSURE safe workplace

Safety is our top priority which cannot be overstressed. KKPC has built a company-wide integrated environment, health and safety (EHS) system, through which we are creating a safe and healthy workplace.
